

COMMUNITY ENGAGEMENT FOR A SUSTAINABLE SCOTLAND

The vision of a truly sustainable Scotland can only be realised if it is shared by everyone. If they are to succeed, new planning and sustainable development policies require the full understanding and involvement of the population. The Virtual Landscape Theatre can help make this a reality.

Transport, housing, energy and flood prevention are issues which affect us all, and imaginative solutions to these will come from accessing the widest range of ideas. The Virtual Landscape Theatre is a forum where people can exchange their opinions and aspirations for our shared environment and the pressing challenges it faces.

'Planning for real' using the Virtual Landscape Theatre

Schools participated at events in Killin and Gartocharn in June 2007 recording their views of future land uses in the National Park.

Our extensive experience with public engagement has taught us that informed views on an issue are achieved by providing the relevant facts in an accessible manner – changing even the most entrenched opinions. The Virtual Landscape Theatre has proven effective in exploring real planning issues with communities across Scotland.
