

SMILE Meeting Scotland

Presentation of a general template for the presentation of Cases study and examples of MuSIASEM applications

*Mario Giampietro, Alev Sorman, Agustin Lobo, Tarik Serrano
ICTA-UAB*

The role of the SMILE cases study in this Work Package

The object of analysis carried out in the case study

A socio-economic system to be characterized in an integrated way in relation to an issue of sustainability

The purpose of the analysis at this stage

A quantitative characterization of the issue addressed in the case study illustrating the potentialities of the DECOIN tool kit

Pointing at new perspectives, findings, explanations in relation to the case study, and formulation of research questions to be answered in the remaining activities of the SMILE project

Follow-up

Further application of the tool kit on the research question indicated in this first phase

The general structure of a SMILE case study in this Work Package

The case study A multi-scale integrated analysis of the performance of Catalonia in relation to the issue of sustainability

The methodologies of the tool-kit used MuSIASEM, SUMMA, ASA

Documents produced

MuSIASEM analysis of Catalonia – historic series, comparison with EU, plus presenting a few ideas for further elaboration

MuSIASEM analysis of Catalonia – paper on policy implications

MuSIASEM analysis of Catalonia – household metabolism

MuSIASEM analysis of Catalonia – land use metropolitan area

SUMMA analysis of Catalonia – assessment of natural support ecosystems

ASA analysis of Catalonia – decomposition analysis historic series (energy intensity)

Follow-up

Comparison of the trajectory of Ireland and Catalonia

???

The general structure of a SMILE case study in this Work Package

The case study A multi-scale integrated analysis of the performance of rural LAOS in relation to the issue of sustainability

The methodologies of the tool-kit used MuSIASEM, SUMMA

Documents produced

MuSIASEM analysis of Laos – multiscale and spatial analysis of rural LAOS

SUMMA analysis of LAOS – assessment of natural support ecosystems

Follow-up

Check if the same approach can be followed for the forestry case study of Finland

???

The general structure of a SMILE case study in this Work Package

The case study A multi-scale integrated analysis of the performance of Romania in relation to the issue of sustainability

The methodologies of the tool-kit used MuSIASEM, SUMMA?

Documents produced

MuSIASEM analysis of Romania – historic series, comparison with EU

MuSIASEM analysis of Romania – quality of data

MuSIASEM analysis of Romania – going to level n-3 and n-4 in the service sector

Integrated analysis of Romania – black economy and emigration (Lucien paper)

SUMMA analysis of Romania? – assessment of natural support ecosystems

Follow-up

Comparison of the trajectory of ?

???

The general structure of a SMILE case study in this Work Package

The case study A multi-scale integrated analysis of the performance of the agricultural sector of Campania in relation to the issue of sustainability

The methodologies of the tool-kit used MuSIASEM, SUMMA, ASA

Documents produced

SUMMA analysis of the agricultural sector of Campania – historic series, comparison with Italy, characterization across levels (national to farm level)

MuSIASEM analysis of the Campania case study – socio-economic interface

ASA analysis of the Campania case study – decomposition analysis historic series

Follow-up

Comparison of . . .

???

The general structure of a SMILE case study in this Work Package

The case study A multi-scale integrated analysis of the performance of the forestry sector in Finland in relation to the issue of sustainability

The methodologies of the tool-kit used MuSIASEM, SUMMA, ASA

Documents produced

MuSIASEM analysis of the forestry sector in Finland – scaling and heterogeneity looking for relevant types and looking for geographic differences

SUMMA analysis of the performance of different typologies of production and different areas

ASA analysis of the forestry sector in Finland – decomposition analysis historic series

Follow-up

Check hypothesis and verify the possibility of performing a more effective analysis
???

The case study of Catalonia

A multi-scale integrated analysis of the performance of Catalonia in relation to the issue of sustainability

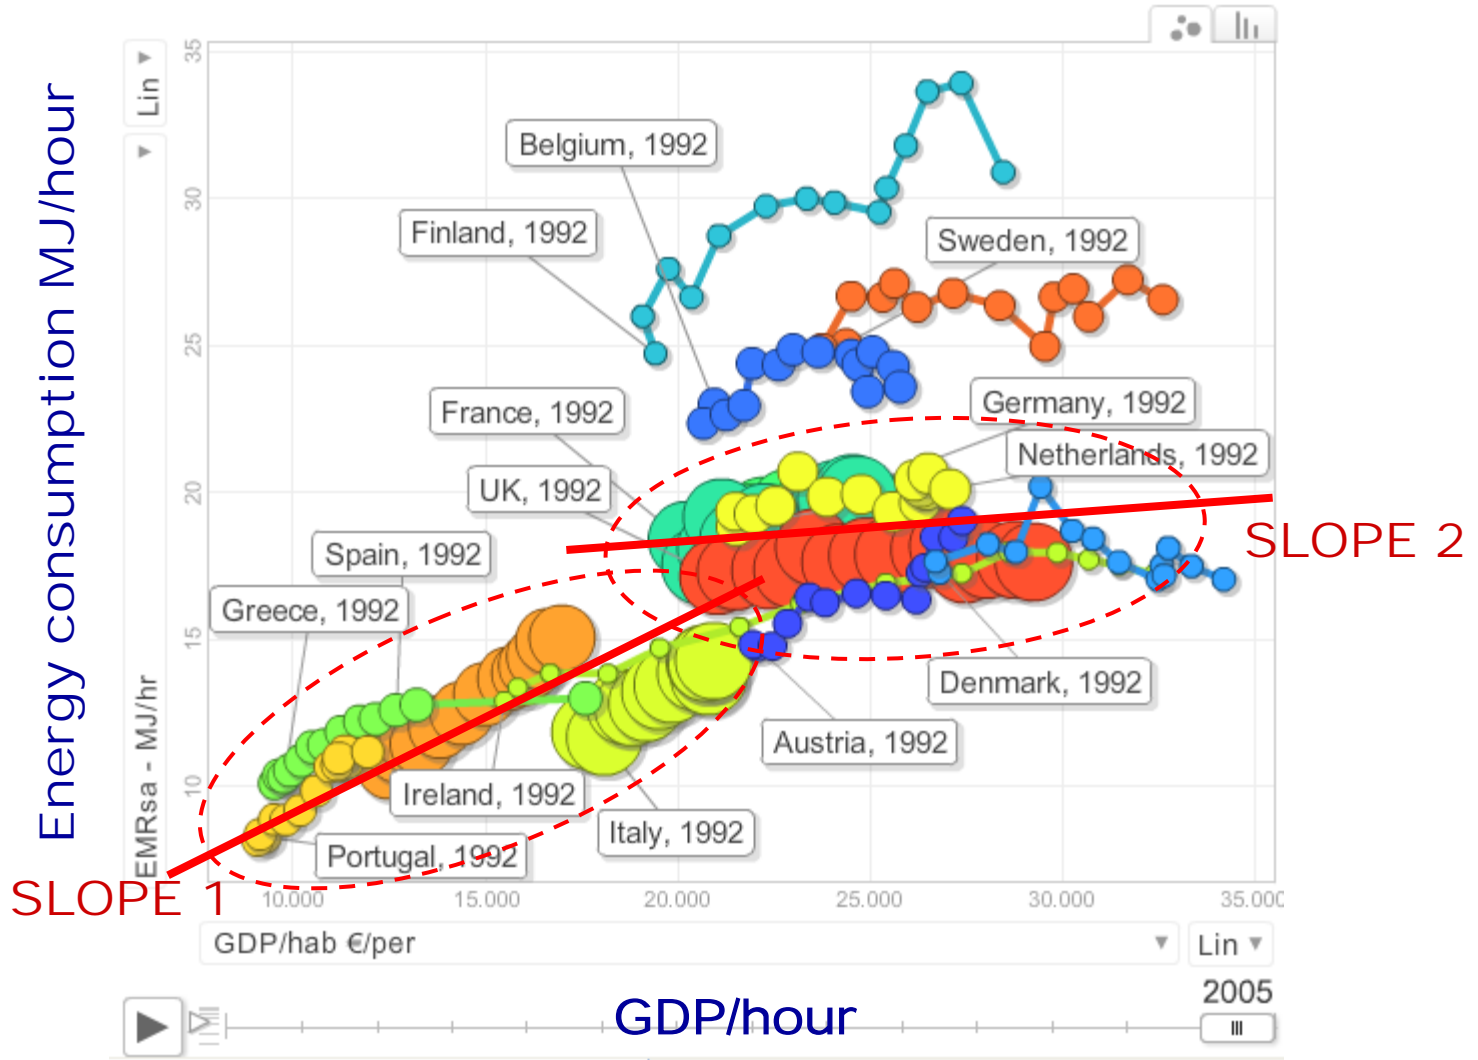

Using MuSIASEM to study across levels the metabolic pattern of Catalonia in comparison with EU countries

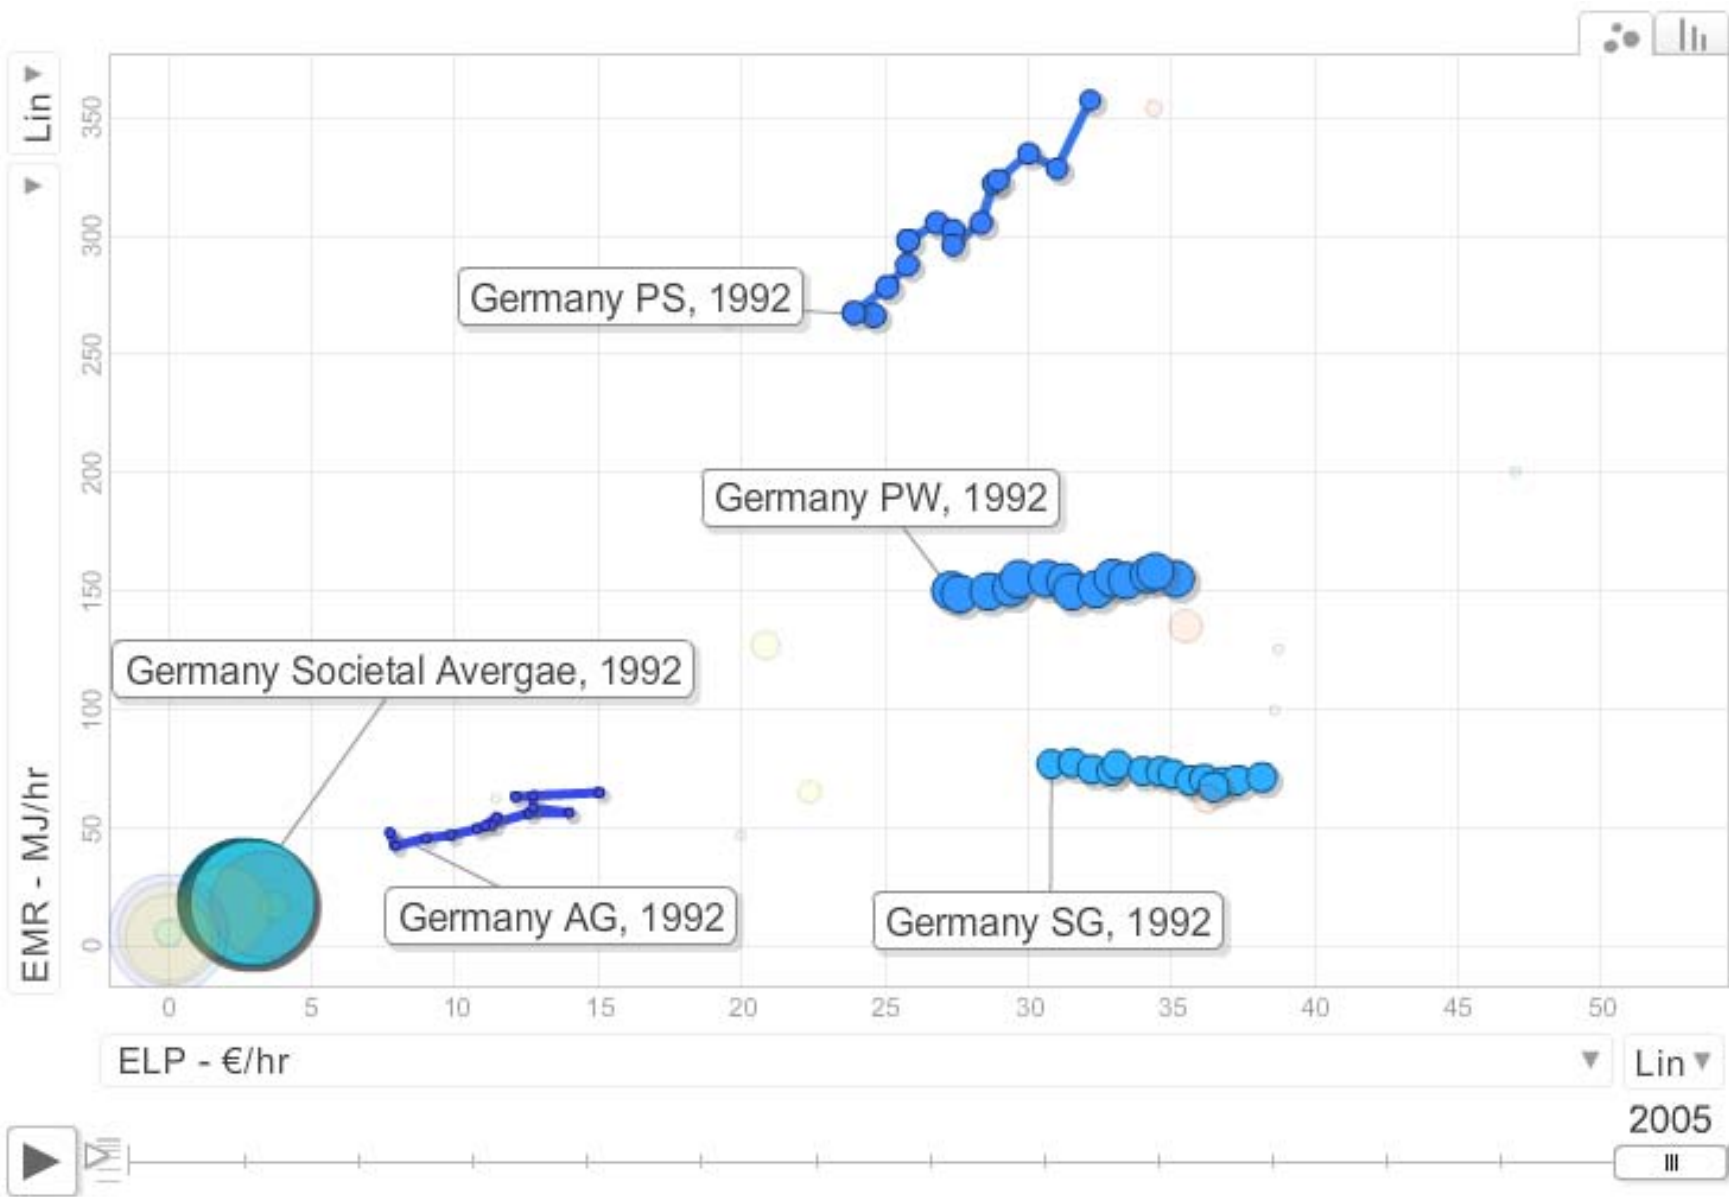

The importance of going multiscale

Indicators relevant for the I=PAT relation and the “black-box level”(level n)

	Spain	Germany	U.K.
I - CO2 Emissions p.c. (ton/year)	352	897	558
P – Population (millions)	42.3	82.5	50.1
A - GDP per capita (€/year)	17,900	26,800	27,000
T - CO2 Emission Intensity (kg/€)	0.46	0.41	0.35

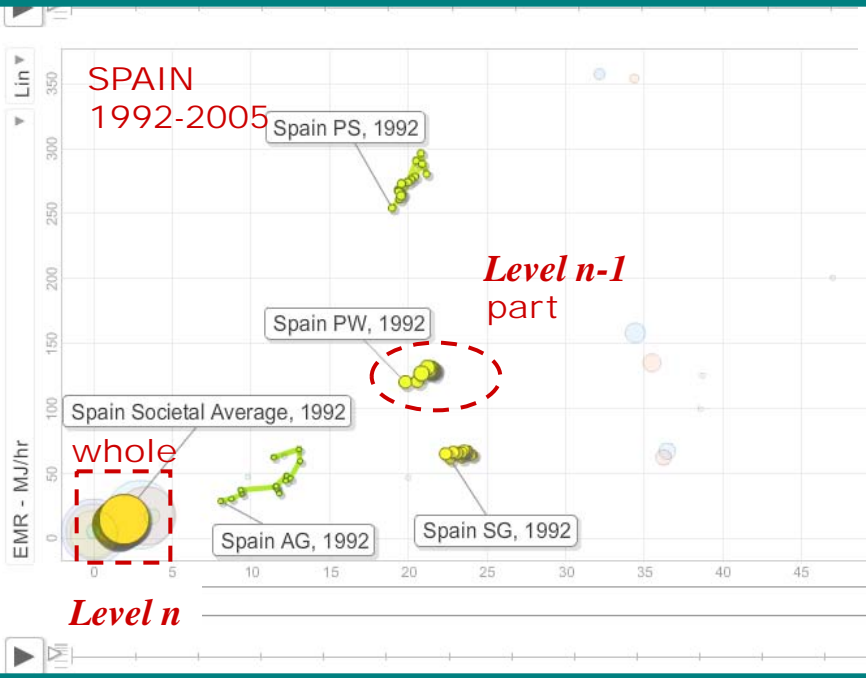

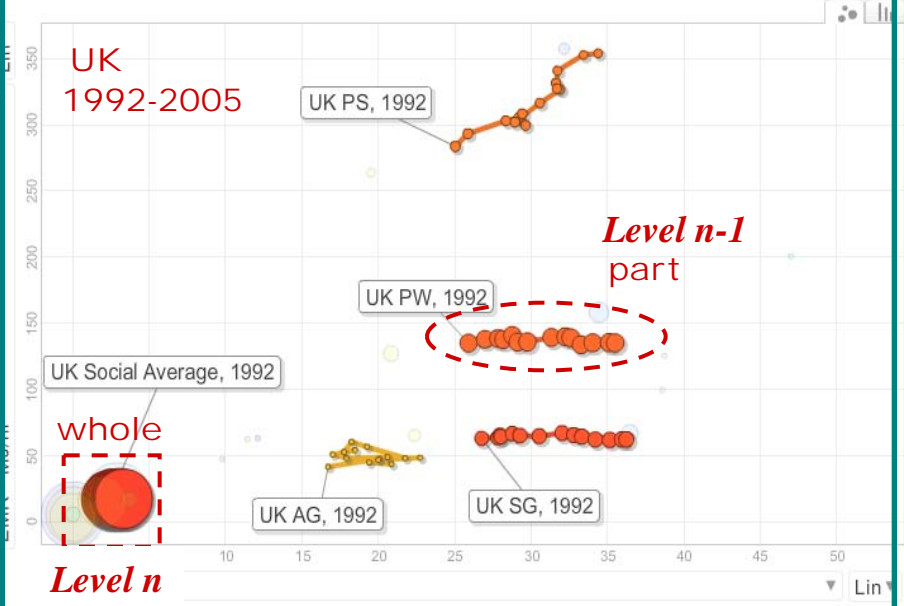

Level n Average Society

Exploring the metabolic pattern at level n-2

Exploring the metabolic pattern at level n-2

Comparing the metabolic pattern across level n-1 and level n-2

The case study of Catalonia

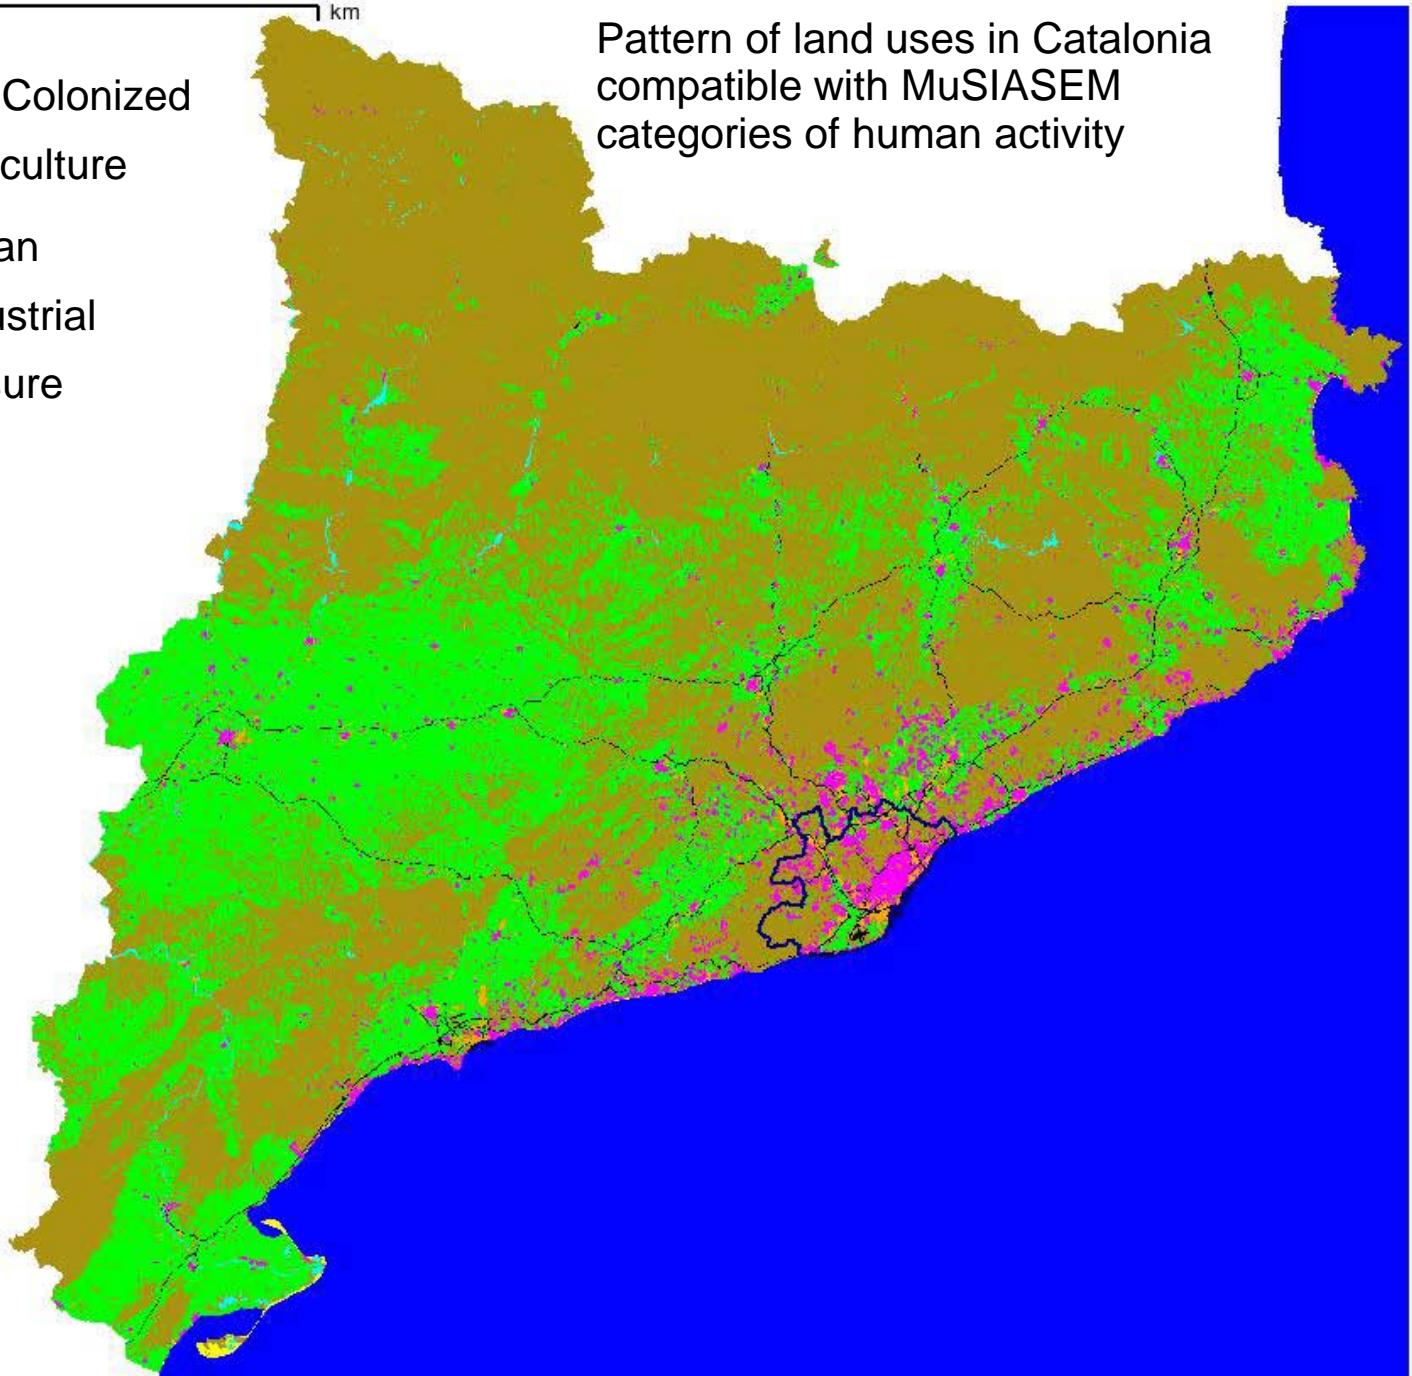

A multi-scale integrated analysis of the performance of Catalonia in relation to the issue of sustainability

Applying MuSIASEM to the density of flows per unit of land

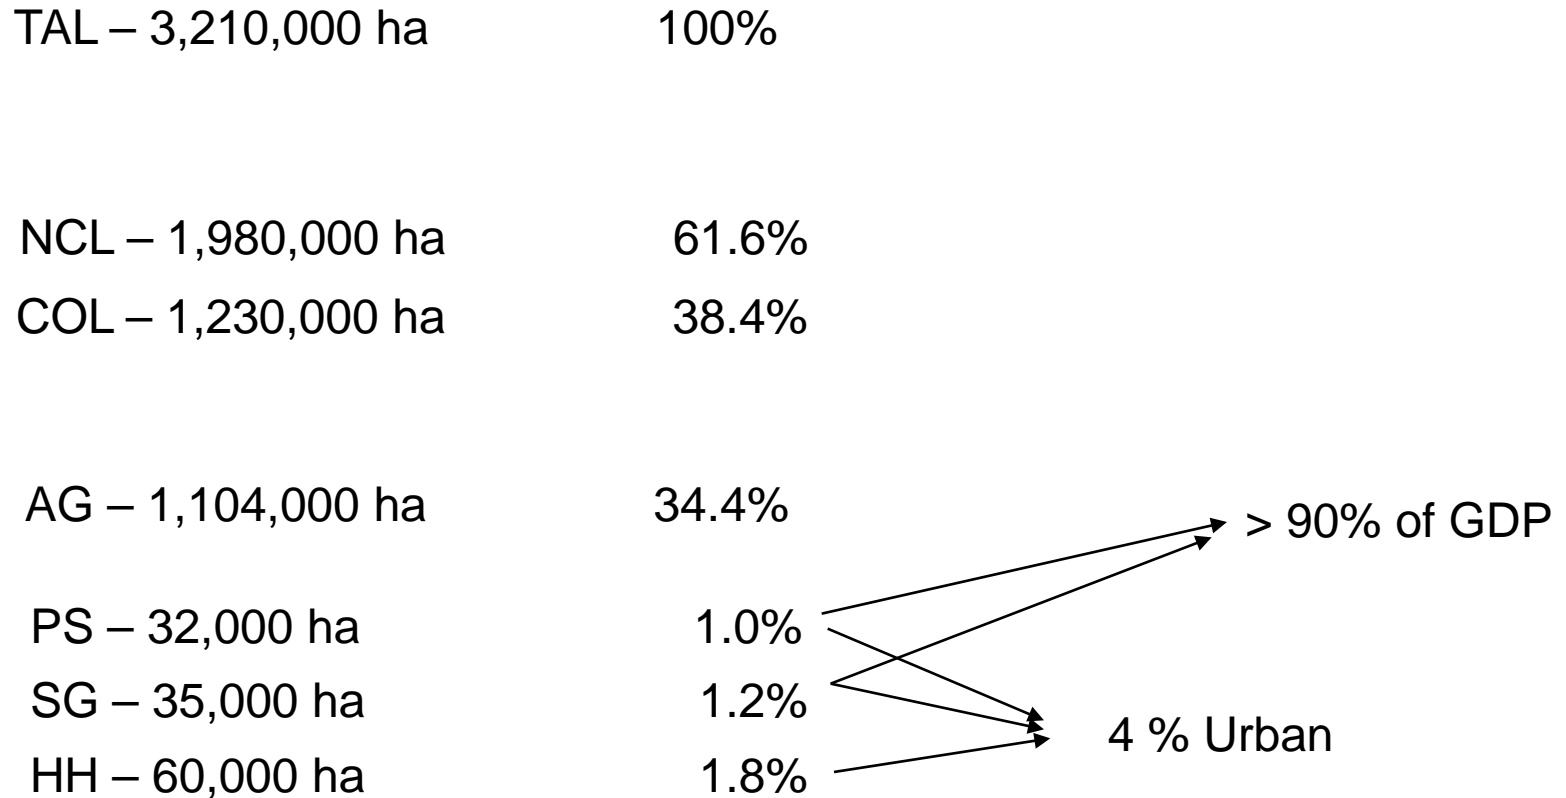

0 80 km

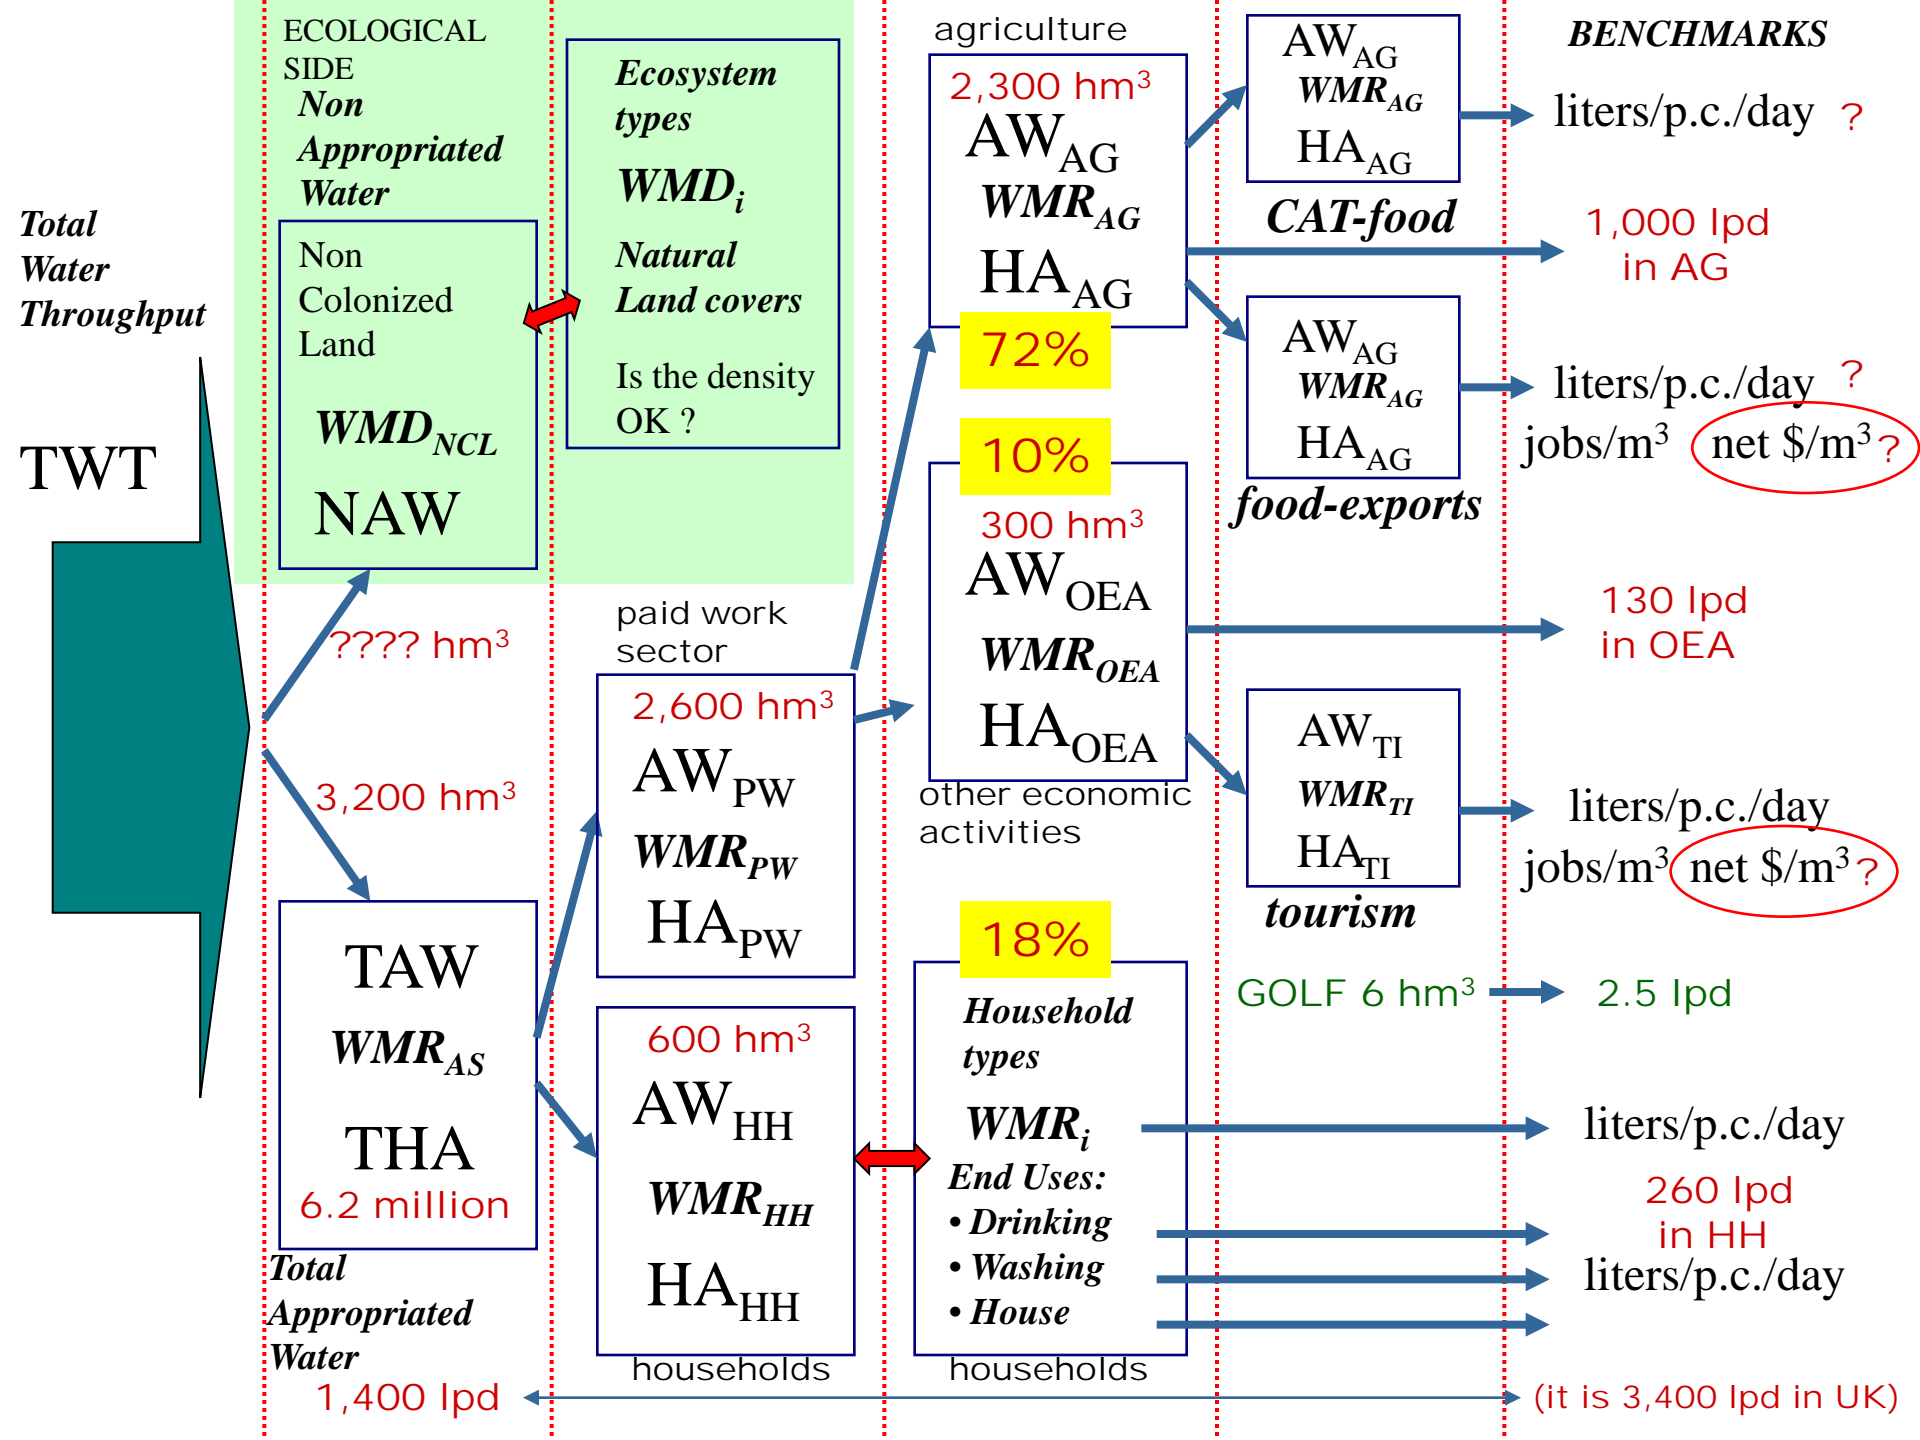

Pattern of land uses in Catalonia compatible with MuSIASEM categories of human activity

- Not Colonized
- Agriculture
- Urban
- Industrial
- Leisure

Severe heterogeneity and non linearity in the pattern of land-use in Catalonia

Examples of the hard work of
Agustin and Miguel

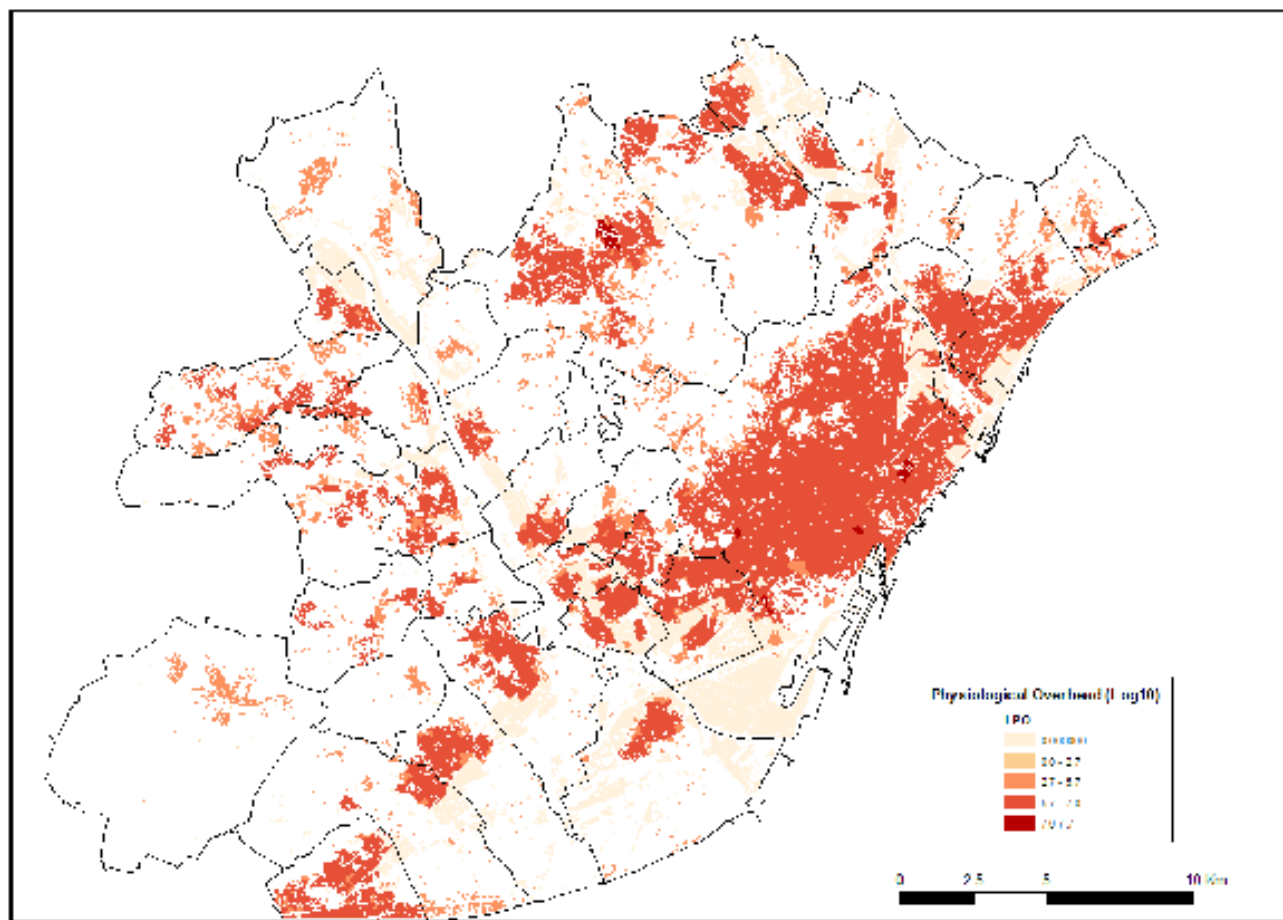

Figure A1. Map of human time devoted to physiological overhead

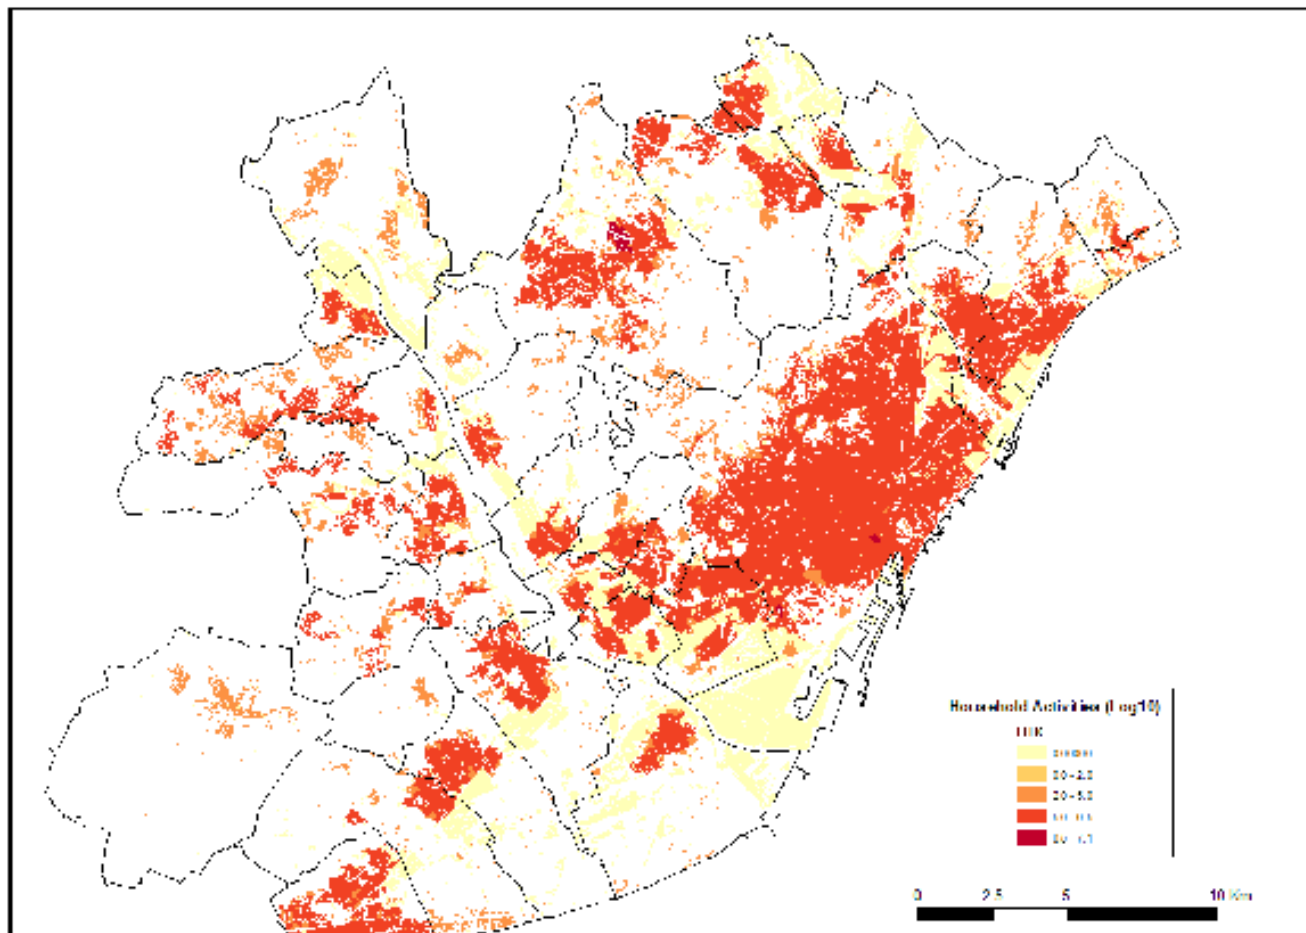

Figure A2. Map of human time devoted to household activities.

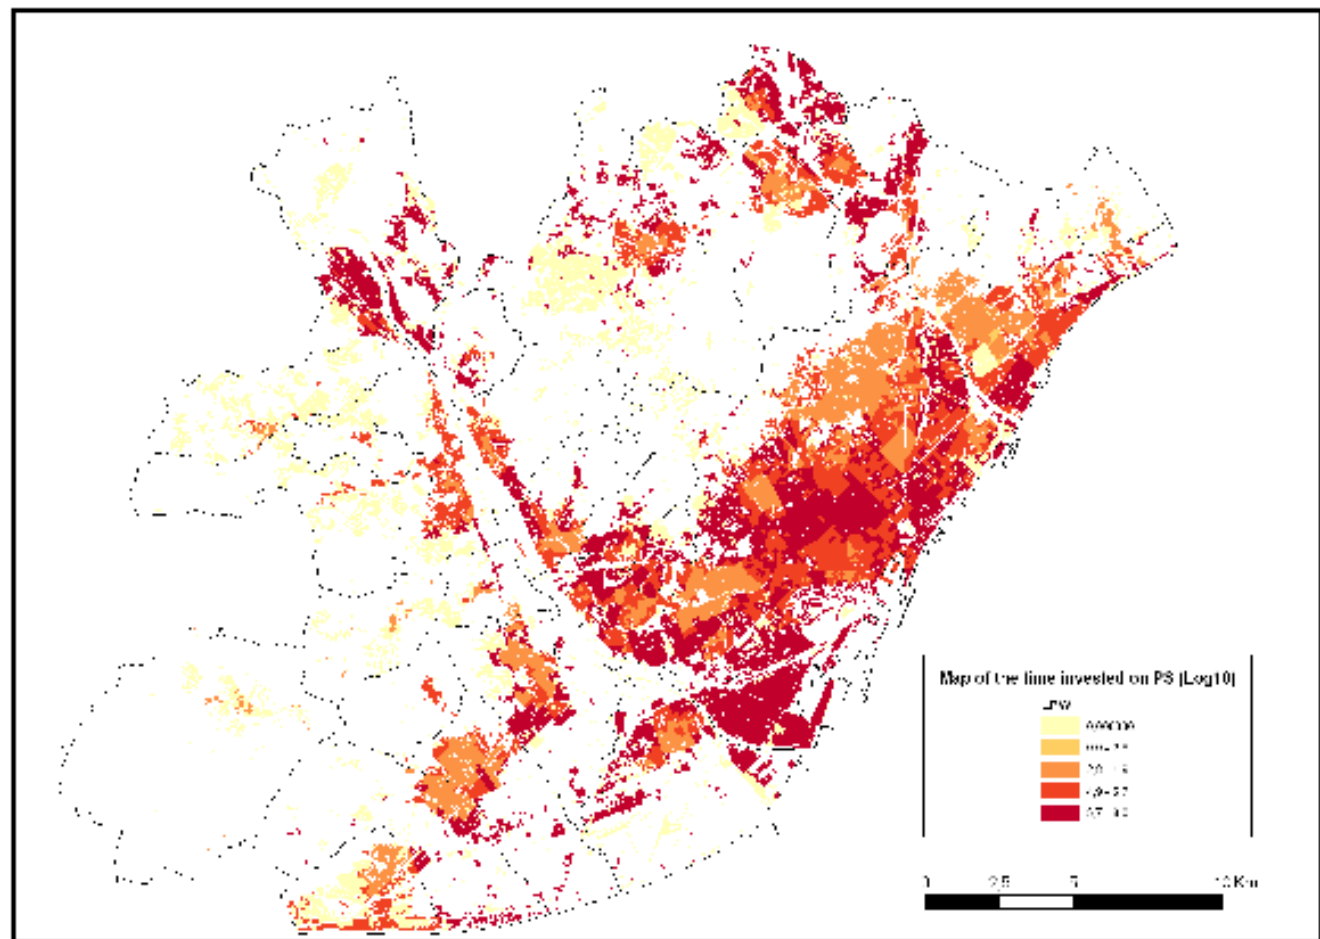

Figure A3. Map of the time invested on paid work in the productive sectors. Logarithmic scale.

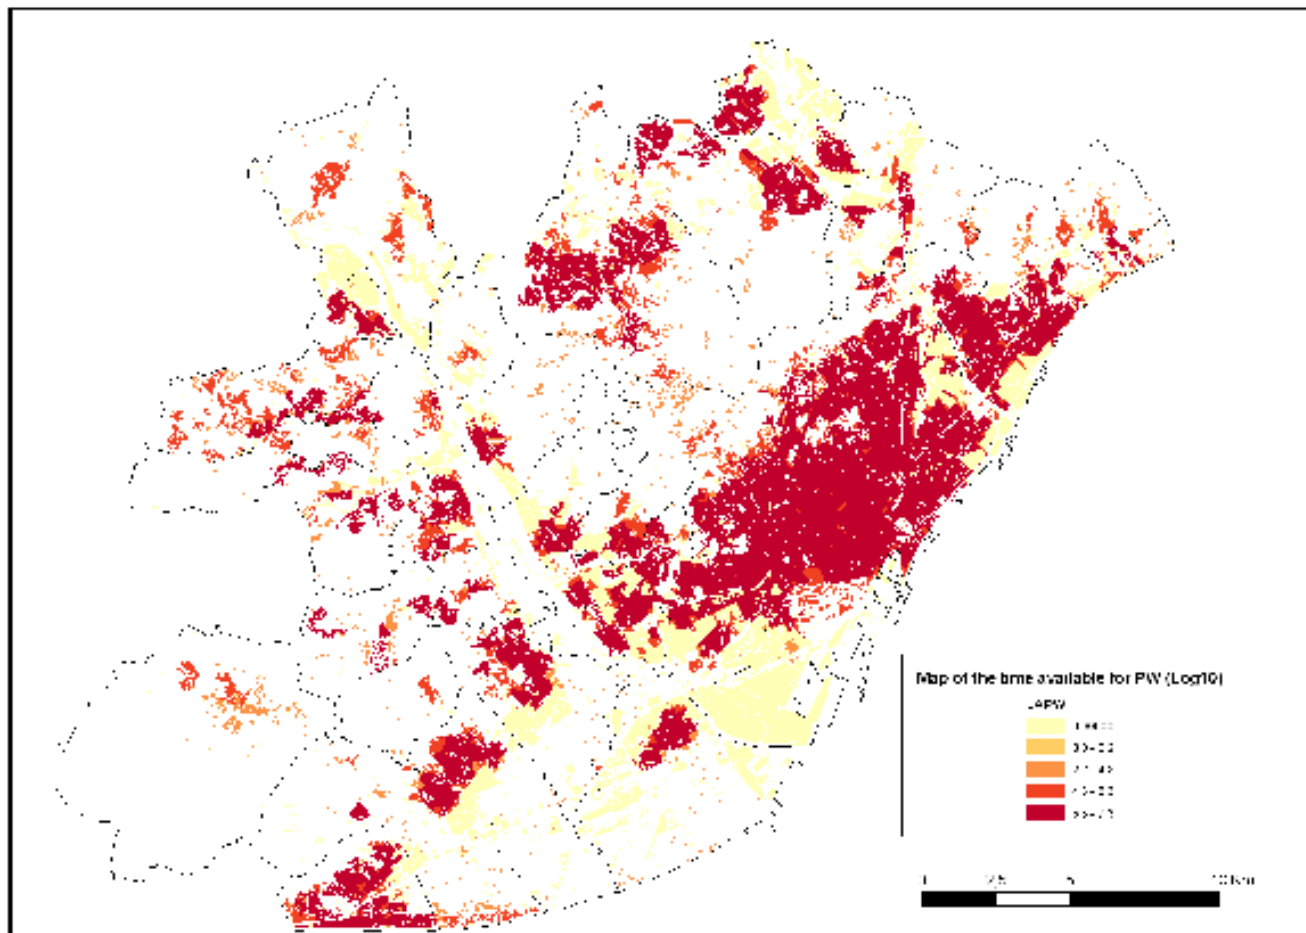

Figure A4. Map of the time available for Paid Work. Logarithmic scale.

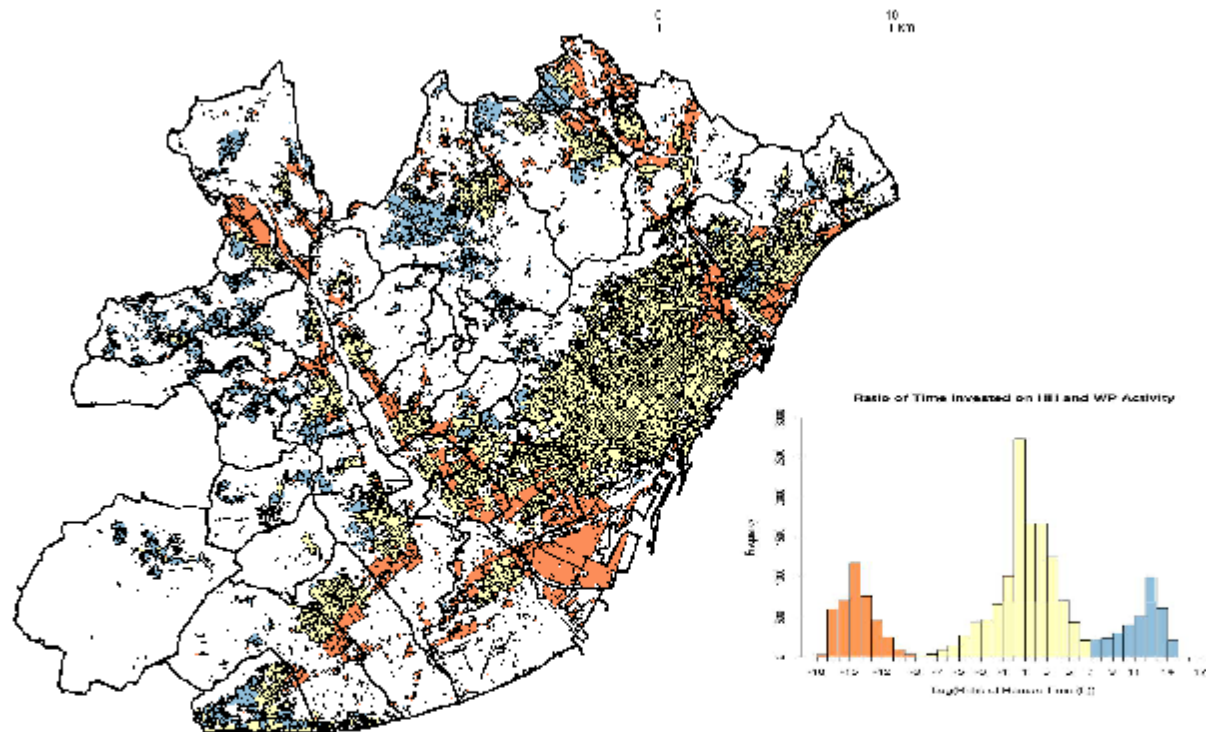

Figure A7. Map of the logarithm of the ratio of human time devoted to household activities and to paid work in the productive sectors. Colors identify the three distributions described by the histogram.

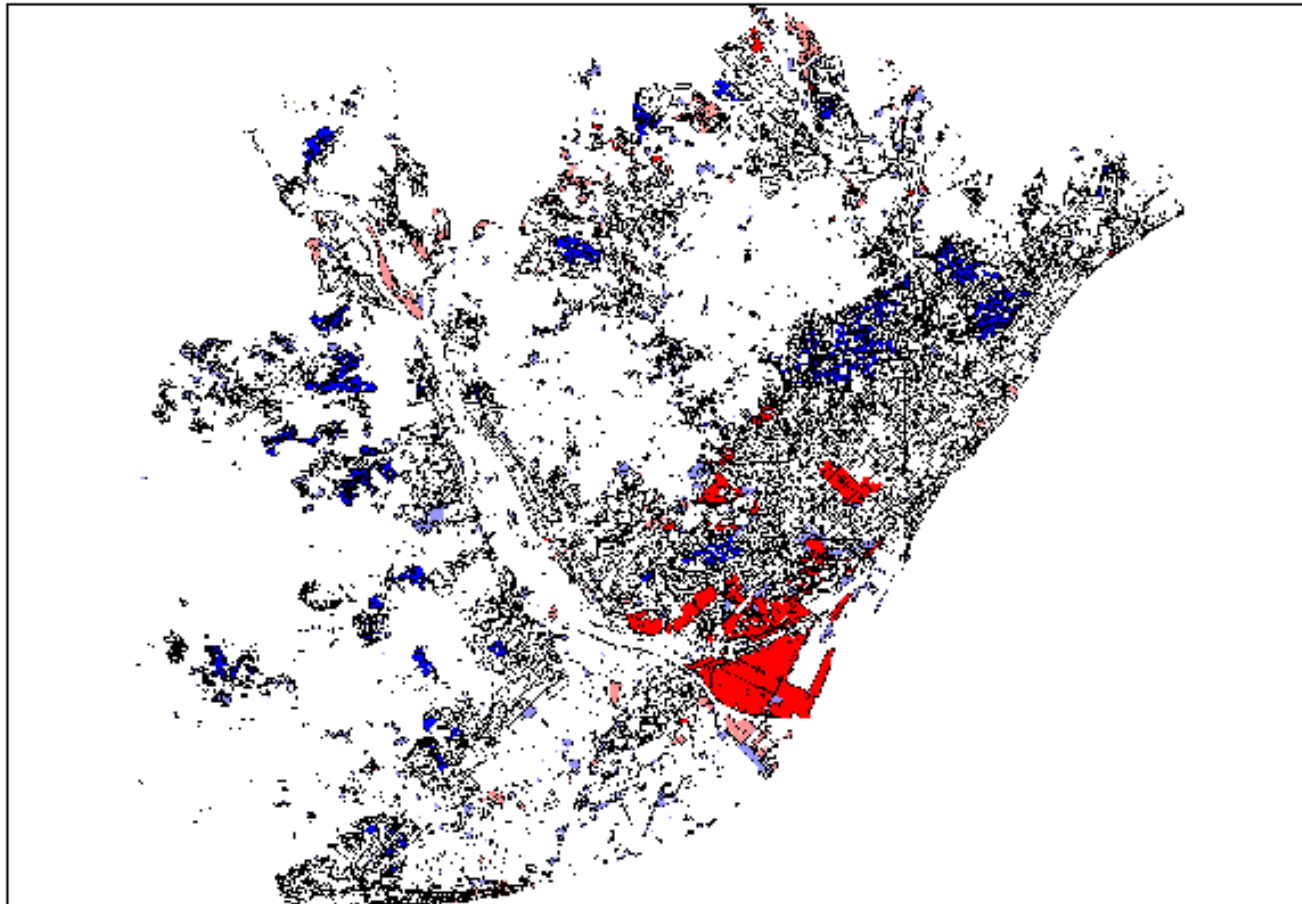

Figure A8. Clusters (LISA) of human time devoted to paid work in the productive sectors. Red, clusters of high values; blue, clusters of low values

Figure A9. Clusters (LISA) of human time devoted to household activity. Red, clusters of high values; blue, clusters of low values.

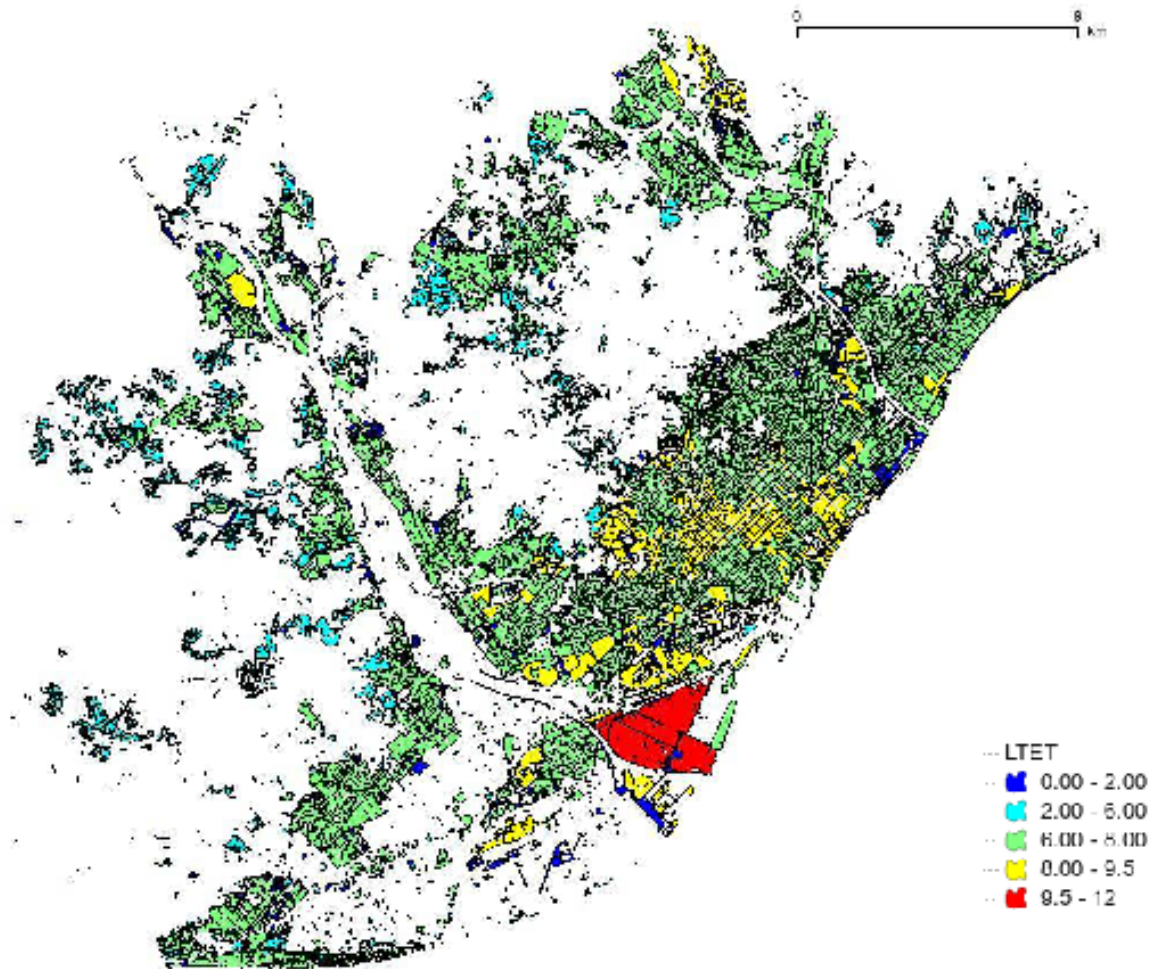

Figure A10. Map of Total Energy Throughput (Log10(MJ))

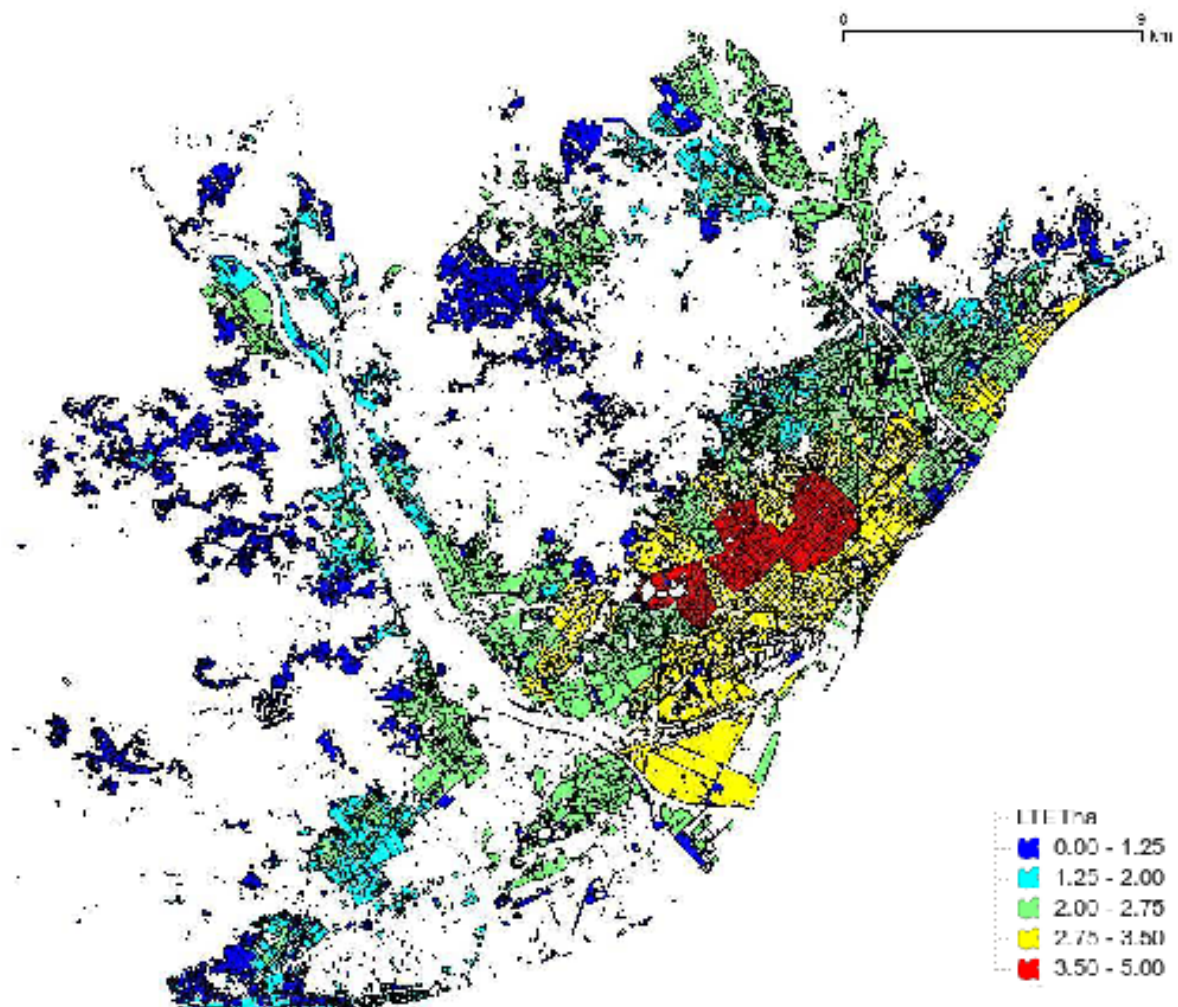

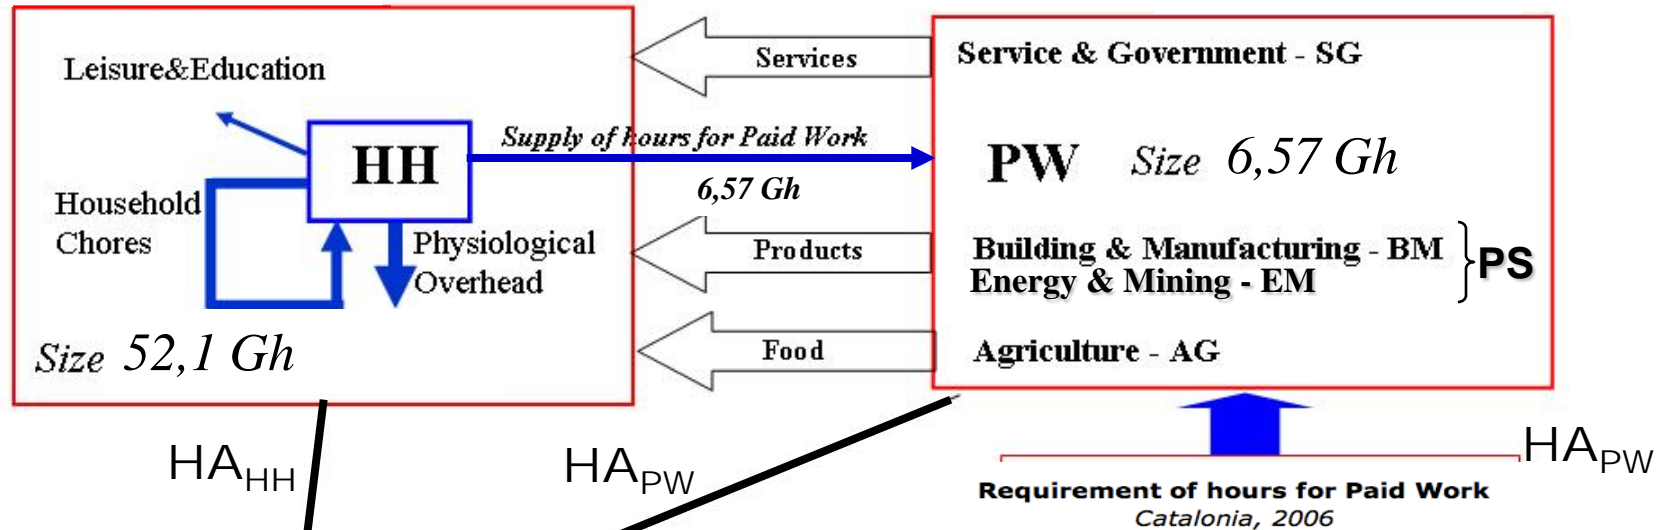

Figure A11. Map of Total Energy Throughput per ha (Log10(MJ/ha))

Examples of the hard work of Gonzalo

LEVEL OF ECONOMIC SECTORS – *level n-1*

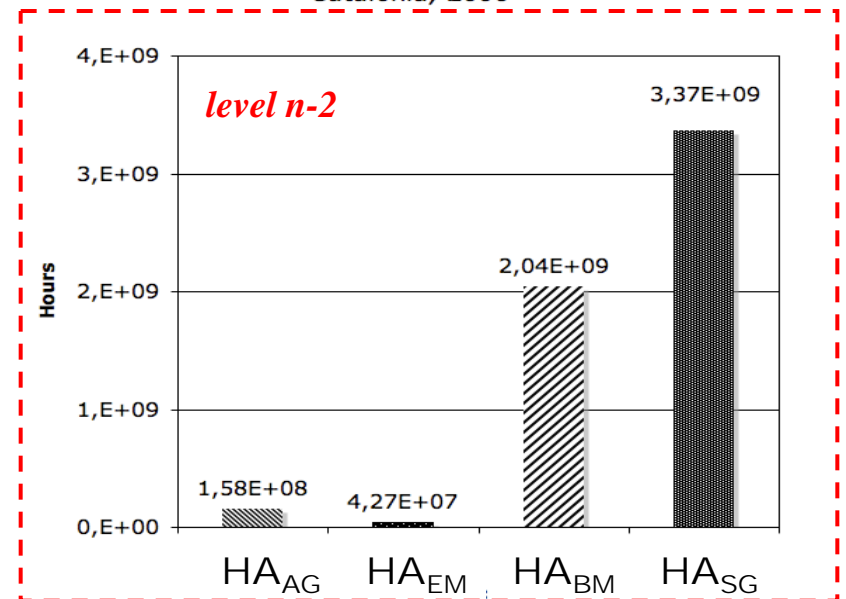

Household Sector

Paid Work Sector

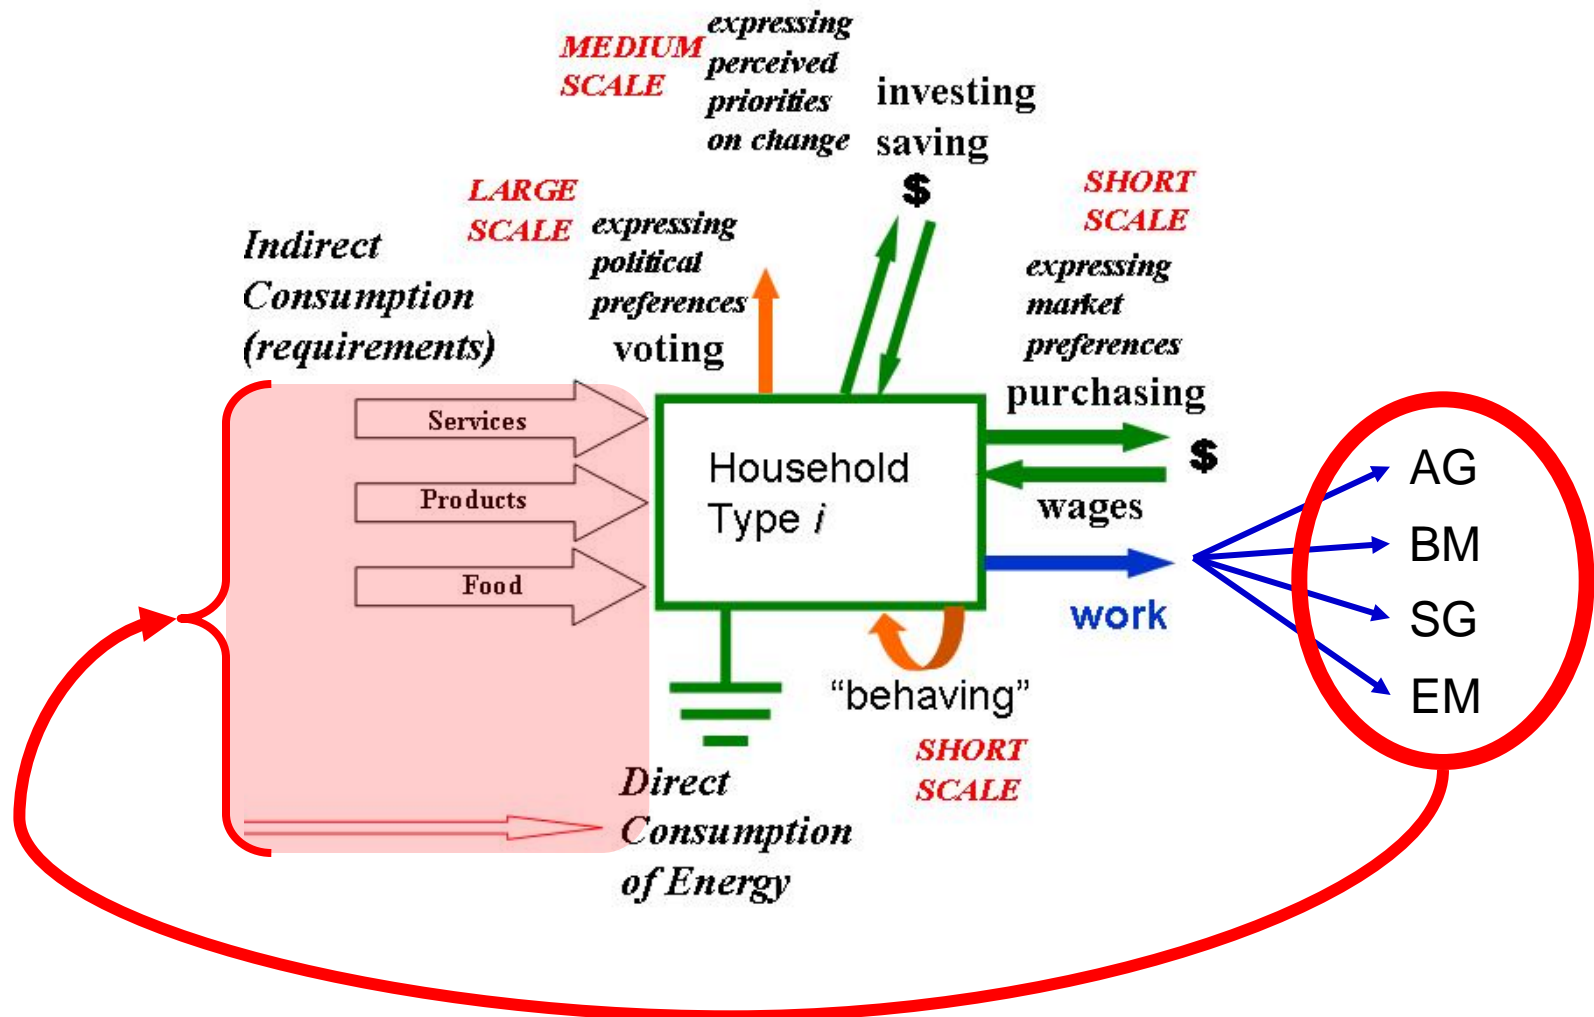

LEVEL OF THE WHOLE SOCIOECONOMIC SYSTEM

Farming System Type #2 Extensive rice cultivation

Village level

Farming System Type #3 – Cash Crops

Village level

The image is an aerial photograph showing a rural landscape. A central area, containing a cluster of buildings and a road, is enclosed in a red rectangular box. The text 'Village level' is written in red, bold, sans-serif font across this box. The surrounding landscape is a mix of green fields, brownish soil, and a winding river or stream on the right side. A compass rose is visible in the bottom left corner, and a small copyright notice '© QGIS 2006' is in the bottom right corner.
